

Reduce your vulnerabilities

Understand and remediate the vulnerabilities in your network.

Every day, attackers try to exploit vulnerabilities in the networks and applications of Canadian SMB's. Furthermore, it can be challenging to meet and to comply with industry regulatory standards. A robust Vulnerability Management service will help you to create processes to audit patch management and validate fixes periodically.

RADAR benefits in a nutshell:

- Your teams and the customer's internal teams can maintain focus on supporting the company's core business.
- RADAR is a cost effective cloud-based service that offers the customer insights through easy to understand dashboards.
- > ISA can audit your customer's patch management, validate if fixes are applied and whether they are applied properly.
- RADAR performs periodic non-invasive virtual scans that do not compromise the customer environment
- Web servers running unsecure FTP's, OpenSSH servers with known vulnerabilities, and other irregularities are picked up by RADAR.

Let ISA's industry leading SOC-as-a-Service do the work for you!

Recently named a Major Player in Canadian Security Services by IDC MarketScape©, ISA offers industry leading SOC-as-a-Service solutions, powered by its Cybersecurity Intelligence & Operations Centre (CIOC). To achieve and support your cybersecurity goals, your ISA Certified Partner can help by deploying RADAR, a state-of-the-art Vulnerability Management service.

Scan and audit with Cloud-based Vulnerability Management.

Here are the top 8 reasons why **RADAR** can be perfect for you::

SOC-as-a-Service model

Validate & audit Patch Management process & results

24x7x365 Support and alerting

Uncover & remediate vulnerabilities by periodic scanning

Canadian Data Residency

State of the art CIOC with 99.999% availability

Best-in-class security experts

Easy to understand insights through dashboards

How does **RADAR** support you?

Vulnerability Management goes well beyond traditional OS patching and auditing.

Not only will the **RADAR** service measure the risk and success of your patch management process, it will also uncover the vulnerabilities in your network, including applications, switches, and firewalls.

Features included in the **RADAR** Service:

*full set of features can be found in the Service Description

24/7 by 365 support and alerting by ISA's best-in-class security experts

Access to unique portal with easy-to-understand dashboards and comprehensive monthly reporting

Complete digital on-boarding experience through VPN and Virtual Scanner

Advanced Analytics measure, analyze and visualize vulnerability data

Alerts and Notifications of critical vulnerabilities, based on severity level

Dynamic Asset Grouping to reduce scan time and accelerate remediation

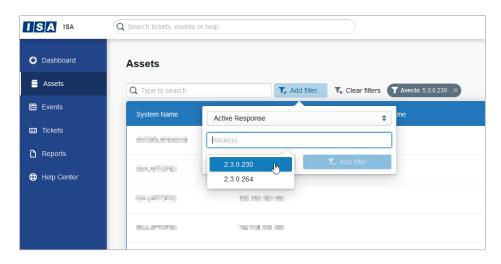

Compliance visibility and checks against industry and regulatory standards like CIS, DISA STIG, FISMA, PCI DSS, HIPAA/HITECH, SCA, and more.

Integrations with leading solutions in patch management, mobile device management, threat intelligence, and more.

Critical insights and reports at your fingertips.

Organizations protected by ISA's SOC-as-a-Service solutions have access to a secure portal where they can access easy to understand insights through dashboards and monthly reports. Automated email reports will be shared after scanning.

We are here to help.

Successful implementation of the RADAR service and, ultimately, your satisfaction rely on clear understanding of the features provided by (and minimum requirements for) the service. Reach out to your ISA Certified Partner for more information today.
